US Tier 2 Markets to Benefit from 100G Connectivity as a Result of Partnership between 365 Data Centers and TeliaSonera International Carrier

Alliance enables faster delivery of data and video to local markets

Emeryville, Calif. Jan. 19, 2015—365 Data Centers, one of the top U.S. colocation providers by market presence, today announced its partnership with TeliaSonera International Carrier (TSIC), a leading global carrier. Together they will deliver 100Gbps connectivity and data center services in key tier 2 U.S. cities. TSIC has so far installed multiple-terabit capacity at six [365 Data Centers](#) U.S. facilities enabling high performance 100Gbps connectivity for businesses, carriers, cable operators, mobile data operators and content, cloud and managed service providers in Buffalo, N.Y.; Tampa, Fla.; Nashville, Tenn.; St Louis, Mo.; Cleveland, Ohio; and Indianapolis, Ind.

“The consumption of video and data via any device, anywhere, is driving the demand for localization of content and increasing edge access speeds. This is in turn rapidly accelerating demand in the formerly under-served, but developing Tier 2 markets that 365 targets,” said John Scanlon, CEO, 365 Data Centers. “Partnering with TSIC to connect our clients with one of the world’s largest 100Gbps enabled backbones is an important part of our service and growth strategy in these locations. It’s beneficial for our entire ecosystem of service providers.”

TSIC was the first carrier with a 100G enabled backbone in both Europe and North America in addition to owning and operating one of the world’s largest fiber optic backbones. The company enables worldwide connectivity by connecting 200 Points of Presence (PoPs) across Europe, North America, Asia, and the Middle East including 44 PoPs in North America alone.

“We’re proud to continue our 100G expansion to meet the increasing demand in the U.S. for rich content and high-speed access,” said Ivo Pascucci, Regional Director and Head of Americas Sales, TeliaSonera International Carrier. “Combining 365’s data center services with our ability to rapidly provision high-bandwidth services, means both parties can offer greater end user value to clients.”

All of 365 Data Centers’ facilities are HIPAA and SSAE 16 compliant and feature power, cooling, connectivity and security 24 hours per day, 7 days per week and 365 days per year with local technical support and services. TSIC’s connectivity portfolio includes capacity, Ethernet, international voice, IPX-based services, specialist mobile services and Internet services.

100Gbps connectivity is available immediately. To find out more about pricing and availability, contact a local representative from 365 Data Centers or TSIC.

About 365 Data Centers

365 Data Centers provides secure and reliable colocation services that offer an easier way to scale business growth and connect to the cloud. Through its 17 U.S. data centers, 100% uptime SLA, and national network of carriers and content providers, 365 Data Centers offers flexible pricing models that let customers pay as they grow with no long-term lock in. Services are secure and tailored for small and

mid-sized businesses, telecom carriers and cloud service providers. We partner with businesses, technology leaders and community leaders to build technology centers that enable economic growth. With 365 Data Centers as a local provider, driving business growth just got easier. For more information, visit 365datacenters.com.
